

# Fluxedita Installation Guide

## Welcome to Fluxedita!

Lets get your editable website live. Youll need a few free accounts to get started.

## Create Required Accounts

Create the following free accounts:

- Gmail (for contact form): <https://accounts.google.com/signup>
- GitHub (code repo): <https://github.com/join>
- Supabase (auth & DB): <https://app.supabase.com>
- Cloudinary (media hosting): <https://cloudinary.com>
- Vercel (hosting): <https://vercel.com/signup>

## Unzip Your Fluxedita Package

Unzip the .zip file and open the folder in VS Code. Rename ``.env.example`` to ``.env`` and enter your credentials.

## Initialize Supabase

1. Create a new project in Supabase.
2. Open the SQL Editor and run these scripts:
  - Initial Schema SQL
  - RLS Policies SQL

3. Go to Auth > Users and create your first user.

4. Run the Admin Promotion SQL script using that user's UUID.

(Scripts are provided in `/supabase/sql/`` inside your package.)

## Initialize Git & Push to GitHub

In your terminal:

```
git init
```

```
git add .
```

```
git commit -m "Initial commit"
```

```
git branch -M main
```

```
git remote add origin https://github.com/YOUR_USERNAME/YOUR_REPO.git
```

```
git push -u origin main
```

## Deploy to Vercel

Import your repo to Vercel and paste your ``.env`` values into the Environment Variables section during setup.

## Start Editing Live!

Open your live site, log in as the admin user, and begin editing your pages directly in the browser.
